MASKINHALLEN · USER MANUAL · VERSION 2.1

FUKT

TWIN FILTER · FEEDBACK · GRIT · DUB ECHO

Two skewed filters, feedback, grit and a dub echo that runs back through the filters. Damp, rumbling and swinging, while kick and sub stay solid.

VST3 · AU · LV2 · STANDALONE
MACOS · WINDOWS · LINUX

14 Troubleshooting

01 WELCOME

FUKT is a filter machine. Put it on a synth, a loop or the whole mix, and make it move.

- Two filters with 7 types each: ladder, diode, scream, sweep, comb, vowel and ring
- Four ways to connect them, and feedback between them, in the style of a Sherman Filterbank
- **BAS-LÅS**: the low end goes around FUKT, so the kick and the sub stay solid
- Grit before the filters, inside the loop or after
- A dub echo that goes back through the filters, with **FRYS** (freeze)
- **GLID**: glide the whole machine between two states with one pad
- Three euclidean rhythms with **MAGI**, a kick detector, an envelope follower, two LFOs and a 16-step sequence
- Drag and drop modulation, with colored rings on the knobs
- 300 presets in 6 categories, dice on every section, and **SPARKA**
- No latency. Smooth changes, so nothing clicks when you turn a knob

ABOUT THE SWEDISH LABELS

FUKT was built in Stockholm, so the controls have Swedish names. The words you will see most:

ON SCREEN	ENGLISH	ON SCREEN	ENGLISH
`Morf`	Morph	`Återkoppl.`	Feedback
`Bas-lås`	Bass lock	`Delning`	Split frequency
`Serie / Parallell / Delad`	Series / Parallel / Split	`Grus`	Grit
`Före / Slinga / Efter`	Before / Loop / After	`Dubkammare`	Dub chamber
`Frys`	Freeze	`Ton`	Tone
`Glid`	Glide	`Djup`	Depth
`Rytm / Rörelse`	Rhythm / Movement	`Steg / Slag`	Steps / Hits
`Följare`	Envelope follower	`Slump`	Random
`Ångra`	Undo	`Ut`	Output

THE WINDOW

02 INSTALL

Unzip the file for your system. You get a folder called **FUKT**. Then run the installer for your system and restart your DAW (or rescan plug-ins). FUKT shows up as an audio effect.

MACOS

1. Double-click `FUKT-macOS.zip` in Downloads.
2. Open Terminal and run:
   `bash ~/Downloads/FUKT/installera.command`
3. Quit your DAW completely and start it again.

VST3, AU and a standalone app. macOS 11 or newer, Intel or Apple Silicon. The installer copies the plug-ins and removes macOS's block on downloaded plug-ins.

WINDOWS

1. Right-click `FUKT-Windows.zip` and choose **Extract all**.
2. Open the `FUKT` folder and right-click `installera.bat` → **Run as administrator**.
3. If Windows says "Windows protected your PC": **More info** → **Run anyway**.

VST3 (in C:\Program Files\Common Files\VST3) and a standalone .exe. 64-bit Windows 10 or 11.

LINUX

1. Unzip `FUKT-Linux.zip`.
2. Run `bash ~/Downloads/FUKT/installera-linux.sh`. It copies the plug-ins to `~/.vst3` and `~/.lv2`.
3. Rescan plug-ins in your DAW (Bitwig, Reaper, Ardour and others).

VST3 and LV2, 64-bit x86 Linux (built on Ubuntu 22.04).

> SWEDISH OR ENGLISH
>
> The machines have Swedish names on the panel. One click on `SV | EN` in the header switches labels, menus and tooltips to English. Your choice is remembered for every MASKINHALLEN machine.

03 UNLOCK WITH YOUR KEY

Your purchase comes with a licence key: four groups of four characters, like `XXXX-XXXX-XXXX-XXXX`. You find it in the Payhip email and on your receipt.

1. Open FUKT. Until it is unlocked, the window shows **UNLOCK FUKT**.
2. Paste the whole key in the field and press `UNLOCK`.
3. Done. You only need to do this once per computer: every MASKINHALLEN machine on the computer finds the key. A bundle key unlocks every machine.

The key is not case sensitive, and I/L and O/0 are treated as the same character, so a typo there does not matter. If it says the key does not work, check that the whole key was pasted. You can use your key on your own computers.

THE FREE DEMO

Every machine has a free demo with the same sound engine. Some presets and functions are locked, and the demo has its own name (FUKT DEMO), so it can sit next to the full version. Buying the full version is what unlocks everything; install it and paste your key.

UPDATES

Updates are free for life. Download the new zip from your Payhip receipt link and run the installer again. Your projects and your key are kept.

04 YOUR FIRST SWEEP IN ONE MINUTE

1. Put FUKT on a synth or a loop and press Play.
2. Pick the category **DJ-SVEP** and step through presets with `<` and `>`.
3. Turn `Bas-lås` to about 100 Hz. Now the kick stays put, whatever the filter does.
4. Press `SPARKA` a few times. The filters stay, the movement changes.
5. Press `NYTT B` in GLID and drag the dot from A to B.
6. Went too far? Press `Ångra`.

05 THE WINDOW

`Top bar`	Category, preset, dice, SPARKA, undo, Mix, Bredd (width), Ut (output) and meters.
`FILTER 1 / 2`	Type, cutoff, resonance and morph for each filter.
`TVILLING`	The live curve, routing, feedback, BAS-LÅS and split frequency.
`GRUS`	Grit: amount, place and type.
`DUBKAMMARE`	The dub echo, its time and tone, and FRYS.
`GLID`	The A/B pad.
`RYTM`	Three euclidean rhythm lanes and MAGI.
`RÖRELSE`	Two LFOs, the kick detector, the follower and the step sequence.

MOD-MATRIS	All sources as tiles, and 12 modulation slots.

06 PRESETS, DICE AND SPARKA

DJ-SVEP	Slow, wide filter sweeps for builds and breaks.
DUB	Echoes that go round and round through the filters.
PUMP	Everything ducks and breathes with the kick.
SKRIK	High resonance, feedback and grit. Acid without a 303.
RYTM	Euclidean rhythms play the filters. Polyrhythm out of anything.
KAOS	Comb, vowel and ring filters, steps and random. Strange but in time.

All presets are level matched, so a preset is not "better" just because it is louder.

ALLT rolls a whole new state. Every section has its own dice in the top right corner, which only changes that section. SPARKA keeps the filters and the grit, but rolls new LFOs, rhythms, steps and modulation. Ångra goes back up to 30 steps.

07 THE TWO FILTERS

Stege	Ladder. Round and fat. Morph goes from 24 dB to 12 dB.
Diod	Diode. Sour and rubbery. Morph takes more bass out of the resonance.
Skrik	Scream. Dirty, MS-20 style. Morph goes from lowpass to bandpass.
Svep	Sweep. Morph goes from lowpass through notch to highpass.
Kam	Comb. Metallic tones at the cutoff pitch. Morph goes from full to hollow.
Vokal	Vowel. Morph glides through A, E, I, O and U. Cutoff moves the voice up or down.
Ring	Ring modulation at the cutoff frequency. Morph sets how much. Resonance darkens it.

Resonance goes all the way to self-oscillation on Stege, Diod and Skrik.

08 TVILLING: ROUTING, FEEDBACK AND BAS-LÅS

`Serie`	Filter 1, then filter 2. With grit in the loop, the grit sits between them.
`Parallell`	Both filters side by side, mixed together. Good for vowel and comb.
`Stereo`	Filter 1 on the left, filter 2 on the right. Instantly wide.
`Delad`	Split. Filter 1 takes everything below `Delning`, filter 2 everything above.

`Återkoppl.` sends the output back into the filters, like a Sherman Filterbank. A little gives weight. A lot gives screaming, singing feedback. It is soft-clipped, so it never explodes.

`Bas-lås` splits off everything below its frequency and sends it around FUKT, clean. Set it to 80–120 Hz and the kick and sub stay solid while the rest goes wild. **Av** means off.

The curve shows both filters as they move. Drop a source tile on the curve to modulate both cutoffs at once.

09 GRUS AND DUBKAMMARE

GRUS

Grit can sit in three places. **Före** (before) drives the filters hard. **Slinga** (loop) puts it in the feedback path and between the filters, which makes the resonance fat and warm instead of thin. **Efter** (after) crushes the result. The types are **Varm** (warm), **Hård** (hard clip), **Vik** (fold) and **Bit** (bitcrush).

DUBKAMMARE

The dub chamber is an echo inside the filter loop. Every repeat goes through the filters again, so it gets darker, stranger and more filtered each time, like dub techno. `Dub` sets how much comes back. `Ton` sets how dark the repeats are. The time follows the tempo. `FRYS` freezes the echo so it keeps looping while new sound passes through.

10 GLID

GLID lets the whole machine glide between two states.

1. Set up a sound you like and press `Spara som B`.
2. Change the knobs to make a different sound. That is A.

3. Drag the dot from left (A) to right (B). Filters, grit, echo and modulation glide together.

Up and down sets **Djup** (depth): how strong all modulation is. At the bottom, everything stands still. At the top, all modulation is doubled.

`NYTT B` rolls a new B for you, close enough to stay musical. `Byt A och B` swaps them. Double-click the pad to reset it. Both directions can be automated in your DAW.

---

11 RHYTHM AND MOVEMENT

RYTM

Three euclidean rhythm lanes. Each spreads a number of **Slag** (hits) as evenly as possible over a number of **Steg** (steps). Give them different lengths, like 16, 11 and 3, and they slide against each other. `MAGI` rotates the patterns and adds or removes a hit now and then, but always in time.

RÖRELSE

`LFO 1 / 2`	Sinus, Triangel, Såg, Fyrkant, S&H and Mjuk (smooth random). In sync or free.
`Kick`	FUKT listens for the kick itself and gives a pulse on every hit. No sidechain needed.
`Följare`	Follows the loudness of the input.
`Steg`	A 16-step sequence. Draw the bars with the mouse. Set length, rate and glide.

When your DAW is stopped, FUKT runs its own clock, so the movement never freezes.

---

12 MODULATION

1. Find a source tile, for example `Rytm 1`. The tiles light up with their signal.
2. Drag it onto a knob, for example `Cutoff` in FILTER 1.
3. A colored ring shows up around the knob. Drop again to make it deeper.

Every connection shows up in the `MOD-MATRIS` as source, target and amount. Drag the amount bar left for negative. `Rensa` clears everything.

13 RECIPES

KICK PUMP

1. Drag `Kick` onto `Ut` (output) and pull the amount negative.
2. Set the kick `Decay` to about 200 ms. Set `Bas-lås` to Av if you want the bass to pump too.

POLYRHYTHM ON A PAD

1. Use `Stege` with cutoff low and resonance around 60 %.
2. Drag `Rytm 1` and `Rytm 2` onto cutoff. Give them 16 and 7 steps. Add some MAGI.

DUB CHORD

1. Load a DUB preset. Set the time to 3/16 and `Ton` low.
2. Drag `LFO 1` onto FILTER 1 cutoff, slow. Hit `FRYS` at the end of a phrase.

WIDE TALKING STEREO

1. Set the routing to `Stereo` and both filters to `Vokal`.
2. Drag `LFO 1` onto Morf 1 and `LFO 2` onto Morf 2.

14 TROUBLESHOOTING

FUKT does not show up	Quit the DAW completely and start it again, or rescan plug-ins. On Mac, run the installer again: it removes macOS's quarantine on the plug-in. On Windows, check that `FUKT.vst3` is in C:\Program Files\Common Files\VST3.
macOS says the plug-in is damaged	That is macOS's block on downloaded files. Run `bash ~/Downloads/FUKT/installera.command` again.
Windows protected your PC	Click **More info** → **Run anyway**. The plug-ins are not signed with a paid certificate.
The key does not work	Paste the whole key, including the dashes. A key for one machine only unlocks that machine; a bundle key unlocks all.
No sound	Press play in the DAW: the machines follow the transport. Instruments go on an instrument track, effects on an audio track or bus.

Anything else? Ask through the store, and the person who built the machine answers.
