GLAPP

MICRO-DRAG GROOVE MACHINE · MIDI · DRUMS · FREE

GLAPP decides when every hit lands: drag, inertia, orbit and empty space. With a heavy drum machine built in. Free, full version.

VST3 · AU · LV2 · STANDALONE
MACOS · WINDOWS · LINUX

01 WELCOME

Most groove generators randomise *which* notes play. GLAPP decides *when* they land.

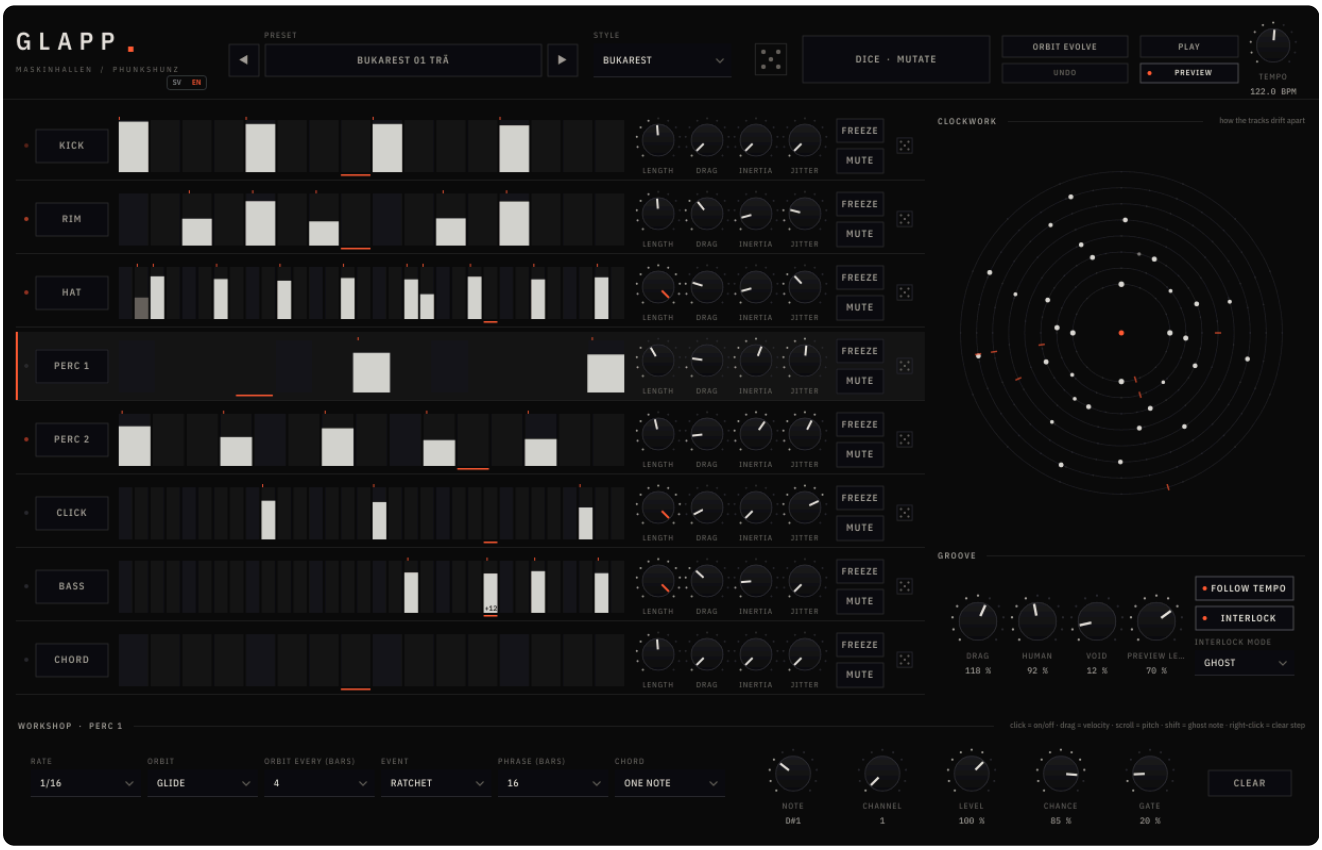

The feel of Romanian minimal and the Berlin minimal school lives in milliseconds: a rim that hangs 20 ms behind the beat, a percussion loop of 13 steps that never lines up with the bar, a ghost note that only exists because two sounds wanted the same spot. GLAPP is built for exactly that. It sends MIDI to BETONG, a drum machine, a sampler or a synth, and every note is placed with sample accuracy.

- **Eight polyrhythmic lanes**, each with its own length (1 to 32 steps) and clock (1/4 to 1/32, including triplets).
- **DRAG, INERTIA and JITTER** per lane: late, sticky and human.
- **ORBIT** makes lanes wander over time, so nothing loops exactly the same.
- **EVENTS** on the last beat of each phrase: silence, a hiccup, a ratchet, a skipped beat or a bouncing wrench.
- **TOMRUM** (empty space) builds the groove from what is not played.
- **INTERLOCK** stops two hits fighting for the same spot.
- **The dice** follows the rules of a style. It never spits out chaos.
- **350 presets** in seven styles.

ABOUT THE SWEDISH LABELS

ON SCREEN	ENGLISH	ON SCREEN	ENGLISH
`Längd`	Length (steps)	`Takt`	Clock / step size
`Tröghet`	Inertia	`Släp`	Drag amount (global)
`Frys`	Freeze	`Tyst`	Mute
`Händelse`	Event	`Fras`	Phrase length
`Nivå`	Level (velocity)	`Chans`	Chance
`Notlängd`	Note length (gate)	`Kanal`	MIDI channel
`Spöke`	Ghost (note)	`Flytta`	Move
`Ångra`	Undo	`Rensa`	Clear
`Verkstad`	Workshop (lane details)	`Urverket`	The clockwork
`Följ tempo`	Follow tempo	`Provljud`	Test sounds

THE WINDOW

02 INSTALL

Unzip the file for your system. You get a folder called **GLAPP**. Then run the installer for your system and restart your DAW (or rescan plug-ins). GLAPP shows up as an instrument.

MACOS

1. Double-click `GLAPP-macOS.zip` in Downloads.
2. Open Terminal and run:
   `bash ~/Downloads/GLAPP/installera.command`
3. Quit your DAW completely and start it again.

VST3, AU and a standalone app. macOS 11 or newer, Intel or Apple Silicon. The installer copies the plug-ins and removes macOS's block on downloaded plug-ins.

WINDOWS

1. Right-click `GLAPP-Windows.zip` and choose **Extract all**.
2. Copy `GLAPP.vst3` to `C:\Program Files\Common Files\VST3`.
3. If Windows says "Windows protected your PC": **More info** → **Run anyway**.

VST3 (in C:\Program Files\Common Files\VST3) and a standalone .exe. 64-bit Windows 10 or 11.

LINUX

1. Unzip `GLAPP-Linux.zip`.
2. Run `bash ~/Downloads/GLAPP/installera-linux.sh`. It copies the plug-ins to `~/.vst3` and `~/.lv2`.
3. Rescan plug-ins in your DAW (Bitwig, Reaper, Ardour and others).

VST3 and LV2, 64-bit x86 Linux (built on Ubuntu 22.04).

> SWEDISH OR ENGLISH
>
> The machines have Swedish names on the panel. One click on `SV | EN` in the header switches labels, menus and tooltips to English. Your choice is remembered for every MASKINHALLEN machine.

03 CONNECTING GLAPP

GLAPP is an instrument that outputs MIDI. By default lane 1 to 8 play C1 to G1 (notes 36 to 43) on channel 1, which are pads 1 to 8 in BETONG.

1. **Bitwig:** put GLAPP on an instrument track and BETONG (or any drum machine) right after it in the same device chain. Bitwig passes GLAPP's notes on to the next device.
2. If your Bitwig version does not pass the notes on: put BETONG on its own track and choose GLAPP's track as its note input (or use a Note Receiver device).

3. **Ableton Live:** put GLAPP on a MIDI track. On a second MIDI track with your drums, set "MIDI From" to the GLAPP track and choose GLAPP in the lower box. Arm the second track or set monitoring to In.
4. **Logic:** use the AU version and route its MIDI output with the environment, or use the VST3 in another host.

Want to hear GLAPP on its own? Since GLAPP 3, `LJUD` (SOUND) is on from the start: a built-in heavy drum kit plays along, so GLAPP makes noise on its own. Turn it off when your own sounds take over.

04 YOUR FIRST MINUTE

1. Press play in your DAW. GLAPP follows the DAW's tempo and play/stop. No DAW running? Press `SPELA` to use GLAPP's own clock and `TEMPO` knob.
2. Step through presets with the arrows, or click the name to pick from all 350.
3. Pick a `STIL` and hit `DICE · MUTERA` until something grabs you.
4. `FRYS` the lanes you love. Roll again: only the others change.
5. Press `ORBIT EVOLVE` to keep the pattern but change how it moves over time.
6. Went too far? `ÅNGRA` goes back, up to 40 steps.

05 THE EIGHT LANES

Each lane has a role. The role decides how the dice treats it, and the order decides who wins in INTERLOCK (higher up wins).

LANE	ROLE	DEFAULT
`KICK`	The anchor. The dice never drags it, interlock never moves it.	C1 (36)
`RIM`	Backbeat in the pocket, 14 to 32 ms late.	C#1 (37)
`HAT`	Offbeats or odd euclidean cycles.	D1 (38)
`PERK 1, PERK 2`	Odd lengths (11, 13, 15, 17, 23) that drift against the bar.	D#1, E1
`KLICK`	Tiny clicks, often 1/32, often gliding.	F1 (41)
`BAS`	Short offbeat stabs with pitch steps.	F#1 (42)
`ACKORD`	Chord stabs (set a chord type in the workshop). Best sent to a synth.	G1 (43)

THE STEP GRID

Click a step to turn it on or off. **Drag** up or down for velocity. **Scroll** over a step to change its pitch in semitones (shown on the bar). **Shift-click** makes a ghost note. **Right-click** clears the step. The thin white tick on each hit shows where it really lands after drag and inertia.

On each lane: `LÄNGD`, `DRAG`, `TRÖGHET`, `JITTER`, `FRYS`, `TYST` and a dice for that lane only. Click a lane's name to open it in the `VERKSTAD` below, which holds clock, note, channel, level, chance, note length, orbit, events and chord.

URVERKET

The clockwork on the right shows every lane as a ring, the kick innermost. Hits are dots, nudged by their drag. Each lane has its own play head going round at its own speed, so you can literally watch the lanes slide apart and meet again.

---

06 TIME: DRAG, INERTIA, JITTER

`DRAG` (0 to 60 ms) makes a lane hit late. Late, never early: a note cannot be sent before it happens, and the pocket is behind the beat anyway.

`TRÖGHET` (inertia) adds delay when hits come in a row: the second hit gets +12 ms, the third +24, the fourth +38. Fast runs sound like they slip on an oil stain.

`JITTER` (0 to 5 ms) adds a little human randomness. It is the same every time the song passes that spot, so exports and loops stay stable.

In `GROOVE`: `SLÄP` scales all drag on all lanes (0 % is dead straight, 200 % is very loose). `HUMAN` scales all jitter. `FÖLJ TEMPO`: drag is set for 122 BPM and follows the tempo, so the feel stays the same at 118 or 128. Turn it off for fixed milliseconds.

`TOMRUM` (empty space) takes hits away. Hats and clicks go first, ghost notes before main hits, hits on the beat last, and the kick never. The same hit always disappears at the same spot, so the space becomes part of the pattern instead of noise. Around 30 % gives air; above 60 % the groove is built from what is left.

---

07 MOVEMENT: ORBIT AND EVENTS

`ORBIT` makes a lane move over time:

- **STEG +** turns the pattern one step later every N bars. **STEG −** one step earlier.
- **GLID** lets the drag breathe: 0, 3, 6, 9, 12 ms and back again, one notch every N bars.

`HÄNDELSE` (event) happens on the last beat of each phrase (`FRAS` = 2, 4, 8 or 16 bars):

- **TYST** silences the lane for the whole last bar.

- **HICKA** throws the last beat's hits 45 ms late: the hiccup that makes the floor lose its jaw.
- **RATCHET** turns those hits into fast triple strikes.
- **HOPP** skips the last beat, a small hole before the one.
- **STUDS** (bounce) is a wrench falling down concrete stairs: five hits, each one closer and softer than the last.

08 INTERLOCK

With `INTERLOCK` on, two lanes never hit at exactly the same moment. The lane higher up wins and the kick always wins. What happens to the loser is set in `INTERLOCK LÄGE`:

- **SPÖKE**: it plays as a ghost note, velocity 18 to 35.
- **FLYTTA**: it is pushed to a late 32nd after the beat.
- **TYST**: it is dropped.

09 THE DICE, STYLES AND PRESETS

Every dice in GLAPP works within the rules of the chosen `STIL`. It never touches `NOT` or `KANAL`, because those are your connection to the drums.

STYLE	CHARACTER
`BUKAREST`	Rolling, woody, very late ghost notes, 15- and 23-step percussion cycles. Sometimes the chord lane stays silent on purpose.
`BERLIN`	Crooked clicks, endless phase drift, odd hat cycles, triplet percussion, tighter drag.
`MIKRODUB`	Sloppy backbeats, sparse 13-step accents, dub chords, extra drag.
`ORGANISK`	Wooden clappers, euclidean kicks now and then, stumbling micro-grooves.
`KÖLN`	Schaffel: hats on 8th-note triplets against a straight kick, dub chords that hiccup, bouncing percussion.
`KLINISK`	Subtractive and clinical: very few hits, short clicks, odd hat cycles, lots of TOMRUM. Silence does the work.
`RASTER`	Mathematical: zero drag and zero jitter, euclidean patterns in 5, 7, 9, 11 and 13 steps against the four-four kick.

Density is always low: percussion lanes get 1 to 5 hits per 16 steps. Minimal is built on silence.

Presets: 350, fifty per style (numbers 1 to 200 are the same as in GLAPP 1). Each preset is a fixed seed for the dice, so it always comes back the same. Frozen lanes are left alone when you change preset, so you can keep your kick and rim and browse the rest.

10 NEW IN GLAPP 3: HEAVY DRUMS INSIDE

GLAPP is still a MIDI machine, but since version 3 it also has a heavy, dark drum machine built in, so it sounds good the moment you load it.

LJUD AND KIT

- `LJUD` (SOUND) is on from the start. Turn it off and GLAPP only sends MIDI.
- `KIT`: six kits made from the BETONG library: ÅNGVÄLT, STÅLPRESSEN, BUNKERN, ROSTVERKET, VALSVERKET and MULLRET. Presets choose a kit, so the same preset always sounds the same.
- Pitch is relative to each lane's default note: the scroll wheel and the chords retune the samples up to ±24 semitones.

MÖRKERSTEGET (THE DARKNESS STAGE)

The same master stage as in KOLV:

`MULLER`	Rumble: the kick through a dark concrete room, only the low end kept, ducked by the kick.
`TRYCK`	Pressure: hard kick clipping, parallel compression and saturation on the bus.
`MÖRKER`	Darkness: takes the top off everything except the kick.

FOUR HARD STYLES AND 550 PRESETS

STYLE	CHARACTER
`HAMMARE`	Four on the floor with rolling pickups, 16th hats with offbeat accent, a rolling bass three 16ths after every kick, clap on 2 and 4.
`INDUSTRI`	Galloping kick, flammed claps, a rim that rolls up to the clap, metal in 16/12 against 5/13/11, offbeat bass with octave jumps.
`HYPNOS`	Psychotic loops: hats accented in 3/5/7, perc and bass in lengths 3–13 that never line up and keep turning.
`STÖK`	Funk that drags: tresillo (3-3-2) in the perc, syncopated bass with pitch jumps, ghost hits, lots of drag on everything but the kick.

In HAMMARE and INDUSTRI interlock is off, so hits are allowed to stack. GLAPP now has 550 presets; numbers 1–350 are unchanged. A new GLAPP starts on **HAMMARE 01 SLÄGGA**.

THE COMPACT WINDOW (3.2)

The window is now 1120 × 680 with a SOUND section for KIT and the darkness stage.

11 TROUBLESHOOTING

GLAPP does not show up	Quit the DAW completely and start it again, or rescan plug-ins. On Mac, run the installer again: it removes macOS's quarantine on the plug-in. On Windows, check that `GLAPP.vst3` is in C:\Program Files\Common Files\VST3.
macOS says the plug-in is damaged	That is macOS's block on downloaded files. Run `bash ~/Downloads/GLAPP/installera.command` again.
Windows protected your PC	Click **More info** → **Run anyway**. The plug-ins are not signed with a paid certificate.
The key does not work	Paste the whole key, including the dashes. A key for one machine only unlocks that machine; a bundle key unlocks all.
No sound	Press play in the DAW: the machines follow the transport. Instruments go on an instrument track, effects on an audio track or bus.

Anything else? Ask through the store, and the person who built the machine answers.
